Aquapole™ Wall & Glass Mount options
also available to suit your home*

Aquapole

Innovation at its finest

Aquapole will unleash your creativity and give you the freedom to create beautiful and original bathroom designs that were previously unachievable.

The Aquapole Indoor and Outdoor shower system is an innovative patented design, manufactured using marine grade stainless steel to the highest quality standards. It brings together the shower slide, hand piece, mixer and plumbing into one integrated unit, providing aesthetic and functional benefits.

This durable construction is suited to a variety of indoor and outdoor installations. You can be sure Aquapole showers will last the test of time in your home bathroom, garden or pool area. Aquapole is an essential addition to any new or renovated bathroom.

The ultimate in clean, simple design. Aquapole enables your shower to stand in the middle of a wet-area bathroom, with the shower head directed towards a tiled wall, corner or other desired area. It is also available in wall and ceiling mount options for situations where floor fixing is undesirable. This has the same good looks, no in-wall plumbing and can be mounted on glass.

Aquapole is easy-clean, compatible with the hand piece of your choice, and its minimal stylish yet unobtrusive design makes it at home in almost any architectural or interior design style.

“Got the Aquapole showers installed in our new home. Words to use to describe them – fantastic, brilliant, bloody awesome. Only something a kiwi could come up with. We are over the moon with them.”

– Alan & Lyn

The Benefits of Aquapole

Allows exciting new bathroom designs

Water can be directed towards a wall, corner, or other desired area

Stunning floor to ceiling design

No plumbing in wall cavities, noise reduction to neighbouring rooms

316 stainless steel, suitable for indoor and outdoor use

5 year warranty

NZ designed and manufactured

Easy installation

Adjusts easily to suit the smallest child or the tallest adult

Plumbed from ceiling or floor, no risk of in wall leaks

Future proofs for age, can be used as a grab rail
